**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-43, drawn to using OAM (Operation, Administration and Maintenance) cells, classified in class 370, subclass 236.2.
  - II. Claims 44-55, drawn to Internet protocol over fixed length network, classified in class 370, subclass 395.52.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I, and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I is concerned with a system for identifying a channel to be used in a TDM transmission system using PLOAM cell; while invention II is concerned with an access control to an ascending line having a fixed length frame in a communication system in which a plurality of subscriber terminals are connected to a terminal station through the same communication medium. See MPEP § 806.05(d).

3. Because these invention are distinct for the reason given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purpose as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR .143).
